

Your in-house, outsourcing solution

Mecrus Technical Solutions (MTS) provides 'whole of business' solutions in process improvement and asset management.

MTS offers customers an opportunity to look outside for answers and new initiatives that will guarantee improvements and better bottom-line results.

MTS offers solutions across the entire processing platform by integrating the skills and experience of a dedicated MTS team into the structure of client companies. This approach multiplies the benefits of change across the business.

Alternatively, MTS can provide technical solutions in specialised areas of process improvement or asset management.

MTS principles of process improvement

The MTS principles of process improvement have been developed from extensive experience across a wide range of industry sectors. They can be applied universally and are not restricted to any one sector.

MTS' services can be provided to clients in ways that best suit their business. MTS can support, manage, run and own assets on behalf of clients. Whatever the arrangement, MTS improves efficiencies and achieves economies of scale in order to stimulate growth, drive up revenues and increase clients profits.

About Mecrus

MECRUS is a wholly Australian owned company whose asset management philosophy is centred on innovative process improvements that lead to superior profitability.

MECRUS is focused primarily on the industry sectors of Energy, Agriculture (food & beverage), Water, Mining and Resources, although the company has a track record of impressive outcomes for clients in many sectors. This clearly demonstrates that the Mecrus principles of process improvement can be achieved universally and are not restricted to experience in a single industry sector.
